ABSTRACT

Fresno County comprises Region 4 of the California Migrant Education Program. The area enjoys a low 6.9% unemployment rate compared to the state average of 7.83%. An analysis of movement patterns of migrant students from, to, and within the state showed that 348 migrant students entered the region from another state in 1977; Texas, Arizona and Washington were the major sending states. Departing to other states were 414 students; Texas, Arizona and Washington received 78% of these students. Intrastate students totaling 3,962 entered Region 4 schools, with 93% coming from other Region 4 schools. Other major sending regions were Regions 3 and 8. Grade level breakdowns showed 2,495 intrastate entries in grade K-6, 856 entries in intermediate grades, and 611 intrastate entries in high school. During 1977, a total of 3,973 intrastate students left schools in Region 4 but 92% of them went to other schools in the county. Almost 9,000 students showed no movement during the year. Inter- and intrastate movement summaries for 1975, 1976 and 1977 indicated an increase in both the number of nonmobile students and in the number of schools in which these students were enrolled. Between 1975 and 1977 intrastate migrant student movements within a given region increased from 88% to 92%. Tabular data includes state, region and county breakdowns on such information as numbers, origins, destinations and grade levels. Statistics from 1975, 1976 and 1977 compare intrastate and no movement figures. (DS)

ACKNOWLEDGEMENTS

D. A. Lewis Associates, Inc., wishes to acknowledge the assistance and insightful suggestions of Mr. Fred Wolff, Administrator of Migrant Education, Department of Education, State of California, whose encouragement and support made this management information study possible.

A special thanks is also extended to Mr. Winford (Joe) Miller, Administrator, Migrant Student Record Transfer System; Mr. Glynn Braswell, Assistant Director for Computing Services, MSRTS; and the MSRTS staff for their extra efforts in providing the data and computer support to California.

We also wish to recognize the important contributions of Ms. Jennifer Coe (programming), Ms. E. Christine Mumma (migrant student demographics), Mr. Jack Lucks (graphics), and Mr. Ronald Mandart (graphics). Tabular design, editorial, and clerical support were outstandingly performed by Mrs. Barbara Busch, Mrs. Eileen Jeter, and Mrs. Melody Stillie.

Benjamin G. Davis
Project Director

CHAPTER 1

REGIONAL OVERVIEW

Region 4 is one of the nine distinct regions in the California Migrant Education Program. The region is composed of Fresno County. As may be seen in the accompanying map (Figure 1), the region is located in the central portion of the State. With a total regional population of 463,700 on July 1, 1977, the region ranks sixth overall. The region is seventh largest in terms of land area (5,998 square miles) and ranks fourth in the total number of farms (7,539).

Recent employment and unemployment figures show Region 4 to be in better condition than the State as a whole (as of June 1977). Of the 247,800 persons actively in the labor force, 17,000 were classified as unemployed for a 6.9% unemployment rate. (By way of contrast, all nine migrant regions averaged 7.61% while the State as a whole had a 7.82% unemployment rate.)

The many migrant education projects within the region compose only one part of the overall education program. With 107,087 students enrolled in classes, the region ranks sixth in overall enrollment when compared with the other eight regions. As the region shows an increase in enrollments, it counters the general pattern statewide.

With this brief description of the region completed, the nature and background of the study will be described. Following this, summary data for the State and detailed data for Region 4 will be presented.

CHAPTER 2

STUDY BACKGROUND

Need for the Study

California is a complex State. The Migrant Education Program is organized on a regional basis and involves a large number of students, yielding a need for extensive information for program planning. Prior to this study, there was no comprehensive, definitive evaluation of the movement patterns of migrant students from, to, and within the State of California. This being the case, administrators and teachers were forced to make decisions with less than complete knowledge as to where the children they were serving came from or went to. The value of this information in policy definition and program planning at the State, regional, and county levels was obvious. This study, therefore, was designed to answer the following questions:

- What are the dimensions of the flow of migrant children to and from other States month by month?
- What are the principal common movement patterns?
- How much intrastate movement is there and what patterns does it take?

The use of the information contained in this report will provide educators and administrators with the planning tools necessary to directly help migrant students by having appropriate migrant educational programs available at the correct time and location within the region.

Study Approach

The analysis of migrant student movements in the State of California and this region involved three basic tasks:

- Data collection,
- Analysis of movement data, and
- Preparation of graphics and final report

The data collection task involved the identification of the form and format of the required data items in the MSRTS and the modification of the computer programs developed by D. A. Lewis Associates to access and extract the data. In addition, as part of the data collection task, migrant population demographic data were collected from other sources, including the U. S. Department of Labor and the U. S. Department of Commerce, for purposes of additional background information and for the validation of MSRTS information.

The second task involved the analysis of movement patterns of migrant students using the data extracted from the MSRTS data base. These data were analyzed to allow an understanding of both intra- and interstate migrant student movements. In the analysis, data were reported separately by grade level for grades K-6, 7-8, and 9-12. In addition, in order to understand true student movements, a move was recorded only when a child actually entered or left a school. Disenrollment and subsequent re-enrollment in the same school was not counted unless the student had been enrolled in an intervening school.

Finally, data were collected and analyzed for calendar years 1975, 1976, and 1977 in order to provide an understanding of trends and changes within the State.

The third task involved the preparation of graphic materials and final report. In meeting the special needs of this study, this final report is composed of 12 volumes:

- State Summary
- Regional Analyses (one for each region)
- Enrollment and Movement Projections to 1981
- A Migrant Education Background Study for a single region

Study Limitations

The data used in the present study were taken from the records contained in the Migrant Student Record Transfer System, a component of the State of Arkansas Department of Education located in Little Rock, Arkansas. The records of all migrant children in the data base were searched, and those that were identified as being connected in some manner with California's program were set aside. In accomplishing this, student records were extracted and processed while maintaining the data privacy of an individual student's record. Individual records and the computer listings which were analyzed did not contain an individual's name or identification number, and both the spirit and letter of Public Law 93-380 were met throughout.

Because the data used in the study were drawn from the MSRTS, they are subject to the limitations which apply to those

data in general. Among the limitations observed are the fact that occasionally students move from a project school to a non-project school and, thus, are not shown as being enrolled during the time away from the program. Further, some students who migrate from California to other States are not recorded as interstate migrants because they are not enrolled in any project schools during the summer in that State. Additionally, migrant student codes were found to be relatively inaccurate in that the codes are rarely updated to reflect changes in a student's movement pattern. Finally, enrollment and/or withdrawal dates are missing for approximately 5% of the children. The report presented, however, accurately reflects the California-related migrant students who have been associated with the MSRTS data base at Little Rock.

Structure of the Report

As was described previously, the analysis of the migrant student movement data for California resulted in the preparation of 12 separate reports. Overall State and regional data are presented in a State Summary volume. This volume contains a detailed analysis of migrant student movements for 1977. In this analysis, an evaluation of interstate entering and departing movements is presented and intrastate (region to region) movements are likewise analyzed. In order to permit an understanding of the changes and trends within the State, a comparative analysis of both inter- and intrastate movements for the years 1975, 1976, and 1977 was also performed.

The nine separate regional reports are similar in content to the State Summary report but, in these cases, the focus is at the regional level. Data are presented to allow an understanding of migrant student movements for each region as a whole as well as on an intraregional (county to county) basis. An understanding of the interaction of the region with each other region and with other States is thus presented for the first time.

In order to assist program planners within the California Migrant Education Program to anticipate future needs, a projection of migrant student enrollments and movements was made to the year 1981 and included in a separate volume. The projections in this volume were based on the comparative analysis of data from MSRTS records for 1975, 1976, and 1977, as well as State program sources for years prior to that.

A final volume has been prepared as a part of this series. In this volume, a summary of the background conditions and factors which impact on migrant education are discussed for a single region. This report has been prepared to provide administrators with a guide as to how data may be assembled and utilized in assisting local decisions to be made in such a way that the specialized needs of migrant children are met.

CHAPTER 3

STATE OVERVIEW

Introduction

This chapter presents a detailed analysis of the movement of migrant students to, from, and within the State of California during the calendar year 1977 and provides a framework against which to measure the separate regional analyses. This analysis has been structured so as to present interstate and intrastate data separately in order to allow program personnel to address the differing needs of these two groups of students.

The first major section of this chapter will present a discussion of those students who move in the interstate stream. These students will be evaluated separately for their entering and departing characteristics. The second major section of this chapter presents an overall summary of the intrastate movement of migrant students within the State of California, the predominant type of movement for California's migrant students.

Interstate Migration

Entering California

The general belief about California's migrant student population was that it was primarily intrastate in character. This study substantiates that belief. In 1977, there were 2753 students reported as entering California from other States during

the year. These students entered the State from 31 other States across the nation and did so throughout the year. As may be seen below, the number of students entering the State monthly vary significantly, with the largest number being enrolled by projects during the month of September. In all, 28.2% of the students entered during that month.

January	152
February	118
March	229
April	308
May	317
June	266
July	136
August	55
September	775
October	215
November	111
December	71
Total	2753

As was mentioned previously, migrant students entered California from 31 other States. As may be seen below, six States supplied over 88% of all migrant students:

Texas	44.8%
Arizona	17.1%
Washington	15.1%
Oregon	5.9%
Idaho	3.2%
Florida	2.4%

In all, 12 States provided 20 or more students to the California program during 1977.

Not only do migrant students enter California from a large variety of States across the nation, they enter all regions within the State. As may be seen in Figure 2, with the exception of Region 9, a significant number of students are reported as entering each region from another State. This figure also provides a detailed review of California's migrant students in terms of their grade levels.

As may be seen, almost three-quarters (72.4%) of all students entering California in 1977 were in grades K-6. An additional 14.4% were in grades 7-8, and 13.2% of the students were in grades 9-12. Analysis of the detailed data contained in the table provides some interesting insights. While overall 13.2% of the students were of high school age, in three regions in particular (Regions 6, 2, and 5), a much larger percentage of the students entering were of that age group. In Region 6, for instance, over 25% of the students entering the region from another State in 1977 were high school students. Further analysis of this information indicates that, of the 42 students entering Regions 6 from the State of Washington, almost 50% were in grades 9-12. Further analysis of this type will allow program planners in each region to determine the types of students that may be expected and will allow them to have programs available as students arrive.

3-4

In order to provide for continuity in the structure of a student's educational program, it is necessary to know the student's home base State. It is in the home base State that the student typically spends the greatest portion of the academic year. With a knowledge of the home base State, it is possible to develop programs that will coordinate with the student's other learning experiences. The major home base States of California's entering interstate migrant students may be seen below:

Texas	42.4%
California	37.1%
Arizona	10.5%
Mexico	2.1%
Washington	1.5%
Florida	1.3%

As is indicated, California ranks second as a home base State. The 1,021 students who are home based in California are California's true interstate migrant students. As a final observation, it is interesting to note that Mexico is listed as home base State for over 2% of all interstate migrant students entering California.

Departing California

As was the case with students entering California, students leave the State to all parts of the country entering 29 different States during 1977. The distribution of students leaving California in 1977 by month may be seen below.

January	69
February	88
March	124
April	159
May	146
June	596
July	137
August	227
September	241
October	563
November	202
December	70
Total	2622

Figure 3 presents the number, regional origin, and destination of migrant students departing California in 1977. As may be seen, four States received over 88% of all migrant students departing California in the year.

Texas	53.1%
Arizona	16.6%
Washington	12.8%
Oregon	5.8%

Information concerning regional departures may also be extracted from Figure 3. As with migrant students entering the State, all regions are involved with interstate departures. This movement is dominated, however, by Regions 3, 1, and 4, which account for approximately 60% of all departures. In terms of the grade levels

of departing students, 11.8% were enrolled in grades 9-12. This proportion very significantly across regions ranging from 23% of those students leaving Region 6 to 5.1% of those departing Region 7.

Summary

As the above sections have shown, the number of interstate students is a relatively small proportion of the total California program. In all, 2753 students are reported as entering the State during 1977 and 2622 are reported as departing the State during the same year. Whether the students are entering or leaving, however, California has a direct relationship with a large number of States across the nation and the need for a broad band of interstate cooperation exists.

Intrastate Migration

Overview

As has been discussed previously, intrastate students dominate the California migrant student scene. In 1977, there were over 82,000 intrastate students identified in California and recorded in the MSRTS. To the extent that these students move infrequently, the problem which students face is not one of continuity but one of interruption. The number of moves these students made during the year is shown below.

No moves	57,704
1 move	14,831
2 moves	8,222
3 moves	1,051
4 moves	200
5 moves	31
Total number of students	82,039

As may be seen, the predominant number of moves made by California children is none (i.e., either settled-out migrant children or those who participated in a migrant program in only one school). Overall, students averaged 1.43 enrollments each (approximately the same number as that found in similar studies for Minnesota - 1.7 and Virginia - 1.3). For those 24,335 who did move within the State of California, the frequency of movement was, again, relatively small. Over 60% of those students moved only one time within the State during the year. In all, those students who did move averaged 2.5 enrollments per child. The intrastate student movement data shown indicate the possible need for two separate program emphases, one for students who are relatively mobile and one for students who do not leave a given area. A further breakdown of the number of migrant students within the State of California for whom no move was recorded in the MSRTS during 1977 is shown below.

Region 1	16,233
Region 2	6,446
Region 3	5,381
Region 4	8,942
Region 5	4,227
Region 6	4,548
Region 7	3,151
Region 8	5,796
Region 9	2,980
Total	57,704

As may be seen, there is a large number of students who do not move throughout the school year within each of the regions in the State.

Patterns

The intrastate movement patterns for California's migrant students follow expected patterns. Most of the movement tends to be within the region with interregional movement decreasing as distance between regions increases. As may be seen in Figure 4, 91.8% of all intrastate movements for migrant students occurred within the regions. The overall average varied from 75.3% for Region 7 to 96.8% for Region 2. In only two cases was there significant interregional movement — from Region 7 to Region 8 (9.4%) and from Region 6 to Region 1 (8.6%). Detail of the intraregional movements on a county by county basis are documented in Chapter 4 of this report.

NOTE: ONLY CHILDREN WHO ACTUALLY MOVED DURING THE YEAR ARE REPORTED IN THIS TABLE.

Figures 5, 6, and 7 provide a further breakdown and explanation of the intrastate movements of students according to their grade levels. One interesting observation from a review of these three tables is that high school students tend to remain more within the region than do primary or intermediate students. For students in grades 9-12, 94% of the movements were intraregional movements. Because of this, regional programs may be established to permit greater numbers of students to complete their high school education with the assistance of the migrant education program.

CHAPTER 4

DETAILED 1977 ANALYSES

Introduction

This chapter expands upon the previous chapter and provides a detailed analysis of migrant student movements for the region itself for 1977. In this chapter, data are presented on a county by county basis for both interstate and intrastate movements. As will be seen, intrastate (and intraregional) movements dominate the overall picture. This being the case, further analysis of intrastate movements for 1975 and 1976 is presented in Chapter 5.

Interstate Migration

Entering the Region

Region 4 ranks fourth of the nine California regions in the number of interstate students which entered directly from another State in 1977. In all, 348 migrant students entered from another State. Of this total, 74% were elementary school students, 15% were intermediate school students, and 11% were high school students. Figure 8 presents the interstate entering data for Region 4. As may be seen, interstate students entered the region, Fresno County, from a total of 18 states. The major sending States for Region 4's interstate students were Texas (56%), Arizona (9%), and Washington (9%).

Departing the Region

As a provider of interstate students to other States across the nation, Region 4 ranks third of the California regions. In 1977, 414 students moved directly from this region to other States. As may be seen in Figure 9, of the 414 students who departed in the year, 73% were elementary school students, 15% were intermediate students, and 12% were high school students. On leaving the region, students moved directly to 17 States. The major States receiving students from Region 4 schools were Texas, Arizona, and Washington which jointly accounted for 78% of all interstate students who left the region.

Intrastate Migration

Entering the Region

While 348 interstate migrant students entered schools in Region 4, a far greater number were identified as intrastate students. In all, 3,962 intrastate migrant students entered a school within Region 4. Students entered the region from all regions in the State. As Figure 10 indicates, the major source for migrant students entering Region 4 schools during 1977 was other Region 4 schools. In all, some 3,668 or 93% of all intrastate migrant students entered schools in Region 4 came from other Region 4 schools.

The major sending regions (excluding Region 4 itself) were Region 3 with 93 migrant students and Region 8 with 83 migrant students. At the county level, the main sending counties were Madera (47 migrant students) and Tulare (46 migrant students).

NOTE: ONLY CHILDREN WHO ACTUALLY MOVED DURING THE YEAR ARE REPORTED IN THIS TABLE.

In order to facilitate an understanding of any grade level differences in intrastate migrant student movements, the data reported in Figure 10 have been disaggregated. In Figure 11, data are presented for grade levels K-6. For these grade levels, there were 2,495 intrastate migrant student movements entering the region. Again, the majority of this movement was intraregional (91%). Students in grades K-6 entered Region 4 from all nine of the California regions. The major sending regions were Region 3 (with 70 migrant student movements) and Region 8 (with 60 migrant student movements).

At the intermediate grade levels, 856 intrastate migrant student movements were recorded. Of these, only 45 or 5%, were not intraregional moves. As is indicated in Figure 12, migrant students entered from seven of the nine California regions, with Regions 8, and 3 predominant with 18 and 11, respectively.

Figure 13 presents data on the 611 intrastate migrant high school student entries into Region 4 schools for 1977. While students entered Region 4 from six of the nine California regions, with the exception of Region 3 (and Region 4 itself) the numbers involved are quite small. In this case, intraregional movements accounted for over 96% of all movements.

Departing the Region

During 1977, 3,973 intrastate migrant student movements were recorded for students leaving schools in Region 4. As was found

to be true for entering students, the majority of departures were to other schools within the region and to other schools within the same county. In all, 92% of all intrastate migrant student departures from Region 4 schools were to other schools within the region. This relatively high level of intraregional movement notwithstanding, migrant students departed from Region 4 to a total of 18 counties in eight of the nine regions of the State. The main receiving regions for students leaving Region 4 were Region 3 (110), and Region 8 (82). As may be seen in Figure 14, at the county level, the counties which received the greatest number of Region 4's migrant students were Madera, Kings, and Kern Counties with 58, 55, and 51, respectively.

As was done with the students entering the regions from other schools in California, the data for migrant students departing the region are also displayed on a grade level basis. Figure 15 presents data for the 2,489 intrastate migrant students in K-6 who departed from the region in 1977. Students in grades K-6 left schools in the region for 17 counties in all but one of the nine California regions, with the main receiving regions (other than Region 4 itself) being Region 3 with a total of 81 students and Region 8 with 57 students. At the county level, Madera, Kings and Kern Counties again dominated as receiving counties with 42, 42 and 35 students, respectively.

Figure 16 presents intrastate migrant student departure information for grades 7-8. A total of 866 students in these grade levels migrated to other schools during 1977. Of this total, only

55 students departed for schools outside Region 4, with Regions 8 and 3 again being the predominant receiving regions.

Information concerning migrant student departures for grades 9-12 is presented in Figure 17. As may be seen, there were 618 intrastate migrant student departures for grades 9-12 in 1977. While students departed for schools in six of the nine regions and to 10 counties in all, only 29 migrant high school students departed for schools outside the region itself. As was found true with entering movements, high school students tend to be somewhat less mobile than students in the earlier grades.

Nonmobile Migrant Students

In addition to those students who moved inter- and intrastate, a number of students were reported on the MSRTS as not moving during 1977. These students are composed of students who either did not move or who were enrolled in only one migrant program throughout the year. In the second case, it is possible that students attended a migrant program in California, moved to another area within California or to another State, and did not enroll in a program at that second location. These students, because of the way the MSRTS is designed, would be reported as having no movements during 1977. A summary of this information is presented in Figure 18. As may be seen in this figure, almost 9,000 migrant students in Region 4 were reported as having no movements during the past year. Because of the large number of students identified

thusly, further analysis of these students should be undertaken at the local level to determine the number that, in fact, do not move during the year so that program services may be properly directed to the mobile student population.

CHAPTER 5

SUMMARY OF 1975 and 1976 INTER- AND INTRAREGIONAL MOVEMENTS

Introduction

Throughout the report, emphasis has been placed on the large number of intrastate migrant students that exist within the State of California. This emphasis has been justified in that the number of intrastate students is reported in the MSRTS data as being approximately 20 times the number of interstate students. Because of this vast differential, an additional look at the trends in interstate migrant student movement is warranted. This chapter, therefore, will present an evaluation of inter- and intraregional migrant student movements for 1975 and 1976.

Nonmobile Migrant Students

The number of migrant students identified within the region as having no reported movements during 1976 and 1975 are shown in Figures 19 and 20, respectively. As may be seen, there was a 27% increase in the number of nonmobile students identified in 1976 as compared with 1975. The number of schools in which these students were enrolled likewise increased. In 1976, nonmobile migrant students were identified as participating in a migrant program in 165 schools within Region 4. By comparison, in 1975, students were enrolled in 159 schools. As a final

comparison for nonmobile migrant students, between 1976 and 1977, this group of students was identified as decreasing by 1%.

Mobile Migrant Students

Figures 21 through 24 present an overview of intrastate migrant student movement for 1976. As may be seen, there were over 30,000 intrastate migrant student movements in 1976. Of that total, the vast majority were, of course, students in grades K-6. A similar pattern may be seen for 1975. Data on intrastate migrant student movements for that year are shown in Figures 25 through 28. In 1975, fewer than 25,000 intrastate migrant students were identified. Between the two years, therefore, there was a 24% increase in intrastate migrant student movements. Within Region 4 itself, 90% of those students who left schools in the region subsequently enrolled in other schools in the region in both 1975 and 1976.

While the data presented in Figures 21 through 28 may appear overwhelming due to the sheer magnitude of numbers, one interesting statistic may be identified. Figure 29 presents an evaluation of the change in migrant student mobility between the years 1975 and 1977. As may be seen in this figure, in 1975, only 88% of all intrastate migrant student movements occurred within a given region. By 1977, however, this figure had increased to 92%. A similar statistic may be seen for students in grades 9-12. As has been mentioned previously, these

PERCENT OF INTRASTATE MOVEMENTS WITHIN A REGION	94.04	93.64	90.52

students tend to be somewhat less mobile than younger students. As such, in 1975, slightly over 90% of the movements occurred within a given region, whereas by 1977, slightly over 94% of the movements occurred within the same region. One conclusion that may be drawn from the data presented in Figure 29 and the information presented previously concerning migrant students who do not move during the year is that there is a significant increase in either settling out or in very localized movement of migrant students within the State of California. The problem facing educators, then, is not one of continuity of educational services but one of interruption of services. The problem, therefore, is not one of how to help children have school information transferred from district to district but how to assist students in catching up on information and learnings that are missed through the interruption of services which accompanies migrancy. If this can be accomplished, the State of California will be able to make vast strides in meeting the specialized needs of each migrant child and in giving the student the opportunity to select for him or herself from the increasing number of opportunities that are available.

This report was prepared for the California Migrant Education Program by D. A. LEWIS ASSOCIATES, INC., a research, consulting, and publishing company. The firm has performed client assignments for federal agencies, over twenty states, and private organizations, including such research as comprehensive needs assessments for migrant education in two States, analysis of the movements of migrant students for eight States, evaluation of the educational and economic impact of preschool day care centers, two separate benefits analyses of the Migrant Student Record Transfer System, management studies for three federal agencies, and State and regional migrant program evaluations for several States. In addition to its research activities, the firm has developed manuals and other publications including The Migrant Educator, the national news publication for educators of migrant children, and the Migrant Administrator's Management Guide.

The principal author of this report is BENJAMIN G. DAVIS, Director of Evaluation and Economic Studies for D. A. Lewis Associates, Inc. Mr. Davis has an extensive background in economic analysis and social program evaluation. His professional specialty is in the economics of human resources with experience in the areas of educational program evaluation, manpower projections and analyses, cost-effectiveness analysis, and management systems evaluation. In addition to the present volume, Mr. Davis has authored publications for the United Nations; the National Center for Educational Statistics, USOE; and the Federal Technical Assistance Team.
